Digital Mammography

Our state-of-the-art digital mammography will make you feel more confident about your breast health. Our imaging department is one of the first health care providers in northeastern Colorado to offer the latest in breast health technology; full field digital mammography. It is our commitment to provide you with the latest technology in a caring and compassionate manner.

Full-field digital mammography captures the picture digitally and is not a digitized image of the old analog picture. It is a digital picture much like your digital camera at home and allows the image to be visualized in seconds. **With this innovation, you can now benefit from less radiation exposure and shorter exam times.**

Early detection is the best way to protect yourself from breast cancer. The American Cancer Society recommends an annual mammogram for every woman 40 and over.

Why Full-Field Digital Mammography?

- Digital pictures have greater clarity at the chest wall and the nipple line which is the second most common area to develop breast cancer.
- The technologist doesn't have to leave the room to access the film, reducing waiting time.
- The picture is visualized in seconds resulting in you and your physician getting the results quicker.
- The picture is reviewed on a high resolution monitor
- The radiologist can enhance the picture by adjusting brightness, contrast and zooming in on specific areas of interest.
- Digital mammograms give a clearer picture, thus less women are called back for additional pictures.
- Digital clarity is especially beneficial for the forty percent of women that have dense breasts.

Breast Health Facts:

- Over 211,000 women will be diagnosed with breast cancer this year.
- Breast Cancer is the most diagnosed female cancer
