Welcome to the Harry J. Cavanagh Cardiology Center

The Harry J. Cavanagh Cardiology Center is named in honor of a distinguished civic leader and compassionate benefactor who has made a difference in improving the quality of life for so many of our community's less fortunate residents.

Harry J. Cavanagh

Banner Health and Banner Good Samaritan Medical Center have been grateful beneficiaries of Mr. Cavanagh's leadership and vision. He is a past chairman of Samaritan Health System and Samaritan Charitable Trust, forerunner organizations of today's Banner Health and Banner Health Foundation. Further, he is co-founder and co-chair with his wife, Geri, of the LPGA tournament in Phoenix for the benefit of Banner Health cancer care programs. For many years he also has been a generous donor to Banner Good Samaritan.

Other generous gifts recognized in the Center include:

- Mr. and Mrs. Verde V. Dickey Family Waiting Area
- Barbara and Clayton Dean Cath Lab
- The Cavanagh Law Firm Nuclear Cardiology Suite
- Harry J. Cavanagh, Jr., M.D.
- Alberta B. Farrington Foundation
- Peter S. Redding
- Stuart R. Smith

- Charles F. ("Chikk") Myers
- David and Renee Lansky
- Roshka Heyman & DeWulf
- Susan E. Wells, PC/Susan Wells
- Richard B. Stagg, in memory of James Francis Stagg, M.D.
- Kinerk, Beal, Schmidt & Dyer, PC
- Boyer, Dolasinski & Miller, PC
- O'Connor & Campbell, PC
- O'Connor & Campbell, PC by Dan Campbell
- The Kurtz Firm

Located on the second floor of the Ancillary Building, the Cavanagh Cardiology Center consolidates the cardiac catheterization labs, non-invasive cardiology and cardiac rehabilitation areas. Patients and visitors can easily access the center from the Main Lobby elevator or from the second floor of the parking garage.

The Harry J. Cavanagh Cardiology Center at Banner Good Samaritan contains six cardiology catheterization labs (above), our non-invasive and nuclear cardiology suites and a spacious cardiac rehabilitation area, all located off a comfortable new reception area.

Our mission:

We exist to make a difference in people's lives through excellent patient care.

Cavanagh Cardiology Center

Cardiac Catheterization Labs - The Cavanagh Cardiology Center contains six spacious state-of-the-art cath labs including one dual-purpose lab that can be used for cardiac cath as well as diagnostic or interventional electrophysiology studies. Four of the labs are equipped with the latest in flat-plate technology that enables true digital acquisition. Two of those labs feature larger flat plates that make it easier to perform peripheral vascular interventions. The area also includes a dedicated 16-bed holding area.

Catheterization involves placing a catheter tube into the arteries to treat numerous heart conditions. Cardiologists at Banner Good Samaritan routinely perform diagnostic angiography procedures in order to obtain accurate images of the heart and blood vessels. They also perform an array of highly specialized procedures designed to remove blockages in the arteries and to keep them open.

Procedures performed in the Banner Good Samaritan Catheterization Lab include:

- Angiography
- Angioplasty
- Brachytherapy
- Coronary rotational atherectomy
- Coronary stent implantation, including drug-eluting stents
- Electrophysiology study
- ICD and Pacemaker implant
- Intracoronary ultrasound
- Peripheral vascular interventions
- Septal defect (ASD, PFO) closures
- Valvuloplasty

The Mr. and Mrs. Verde V. Dickey Family Waiting Area welcomes patients and families to the Cavanagh Cardiology Center. Below, patients on the road back to a healthy life work out in the new Cardiac Rehab exercise area.

Non-invasive Cardiology - Physicians in the Cavanagh Cardiology Center have a number of tools to help them diagnose the source of heart ailments and the best method of treatment. Tests commonly used to diagnose heart disease include:

- Diagnostic Cardiac Catheterization
- Echocardiography
- Transesophageal echocardiography
- Treadmill stress testing
- Nuclear stress testing
- Holter monitors
- Event recording
- Electrocardiography (ECG)

Cardiac Rehab - Having a heart attack or heart surgery need not limit your enjoyment of life. The cardiac rehabilitation program at Banner Good Samaritan can help patients return to a productive, active and satisfying lifestyle. Our team of rehabilitation professionals offers a medically supervised program designed to meet the patient's personal needs.

The cardiac rehab team consists of the doctor, cardiac rehab nurses, exercise specialists, dietitians and other health care professionals. The patient and family are the most important members of the rehab team. The personal goals identified by the patient and the health care team can help reduce symptoms and the chance of having more heart problems.
