

Banner Baywood
Medical Center

Banner Baywood Medical Center

Established in 1984, Banner Baywood Medical Center is a 342-bed acute care hospital serving the varied health care needs of the growing far East Valley of metropolitan Phoenix.

Part of the Phoenix-based nonprofit Banner Health, we are committed to providing excellent patient care through a full range of clinical and specialty services, including programs for stroke care, women's health, emergency medicine, orthopedics and general surgery.

We are recognized nationally as a leader in neurosciences. Our East Valley Stroke Center has earned distinction and certification from the Joint Commission on the Accreditation of Healthcare Organizations as a **Primary Stroke Center**. This designation is granted only to hospitals that have proven to meet the unique needs of stroke patients.

At Banner Baywood, we use the latest diagnostic and treatment technologies, offer a specialized stroke unit, and are supported by a team of neurologists and nurses trained in stroke care. These services combined with a commitment to clinical excellence and patient safety enable us to improve outcomes and make a difference in the lives of stroke patients.

In addition, Banner Baywood is the East Valley's only accredited **Chest Pain Center**, as recognized by the Society of Chest Pain Centers for achieving a higher level of expertise in treating and managing the care of patients who arrive with symptoms of a heart attack.

Our Team

Banner Baywood employs nearly 2,000 health care professionals and support personnel, and has a medical staff of more than 800 primary care and specialty physicians. We are fortunate to be supported by approximately 500 volunteers who generously give their time and talent to help fulfill our mission of making a difference in people's lives through excellent patient care.

Banner Heart Hospital

Banner Baywood Medical Center shares a medical campus with Banner Heart Hospital, an accredited Heart Failure Institute providing highly-specialized cardiology services.

In addition to telemetry and intensive care services, this state-of-the-art facility also features a Heart Rhythm Center to serve patients with cardiac rhythm disturbances and a Women's Heart Center dedicated to meeting the unique heart care needs of women.

Patient Resources

Banner Baywood offers CarePages, a free web-based service that enables patients to keep their friends and family updated about their health status in a secure online environment.

Partners in Caring

The hospital's Partners in Caring program provides family members or friends who wish to actively participate in a loved one's care with the appropriate structure and support to do so.

Care Partners can assist in personal care tasks such as bathing and grooming, accompany patients to tests and treatments, and fulfill many other duties based on the desires and capabilities of both the patient and Care Partner. Most importantly, a Care Partner can advocate for a hospitalized loved one and work with the health care team to enhance the healing process and overall care experience.
