NEUROSCIENCES

Neurosciences program offers expert treatment

Banner Baywood Medical Center is committed to making a difference in the lives of people with diseases, disorders and injuries of the brain and nervous system.

We help patients with seizures, acute confused states, neurological infections, and neuromuscular and neurodegenerative disorders.

Stroke Care

Banner Baywood's neurosciences program is nationally known for our stroke care. We offer state-of-the-art diagnostic and treatment technologies, a specialized stroke unit and a team of neurologists and specially trained nurses.

Our nationally recognized Primary Stroke Center offers timely response and intervention for acute stroke patients. As part of the Banner Neurosurgery Network, we also offer patients emergency neurosurgical consultation.

John J. Rhodes Rehabilitation Center

For some stroke patients, the John J. Rhodes Rehabilitation Center at Banner Baywood plays a pivotal role in recovery. The Center is an acute inpatient rehabilitation program that helps patients with physical, speech, occupational and recreation therapies.

The Center helps patients maximize their abilities, prevent complications and promote healthy behaviors following an illness or injury.

Sleep Disorders Center

We also offer a Sleep Disorders Center accredited by the American Academy of Sleep Medicine. The Center helps to diagnose and treat such sleep-related disorders as sleep apnea, excessive sleepiness, restless legs, insomnia and more.

Memory Clinic

Our Memory Clinic provides assessments for people who are concerned about memory loss, Alzheimer's disease and other cognitive impairment. The clinic provides a consultation service that includes cognitive testing, diagnosis, treatment and guidance for adults who have problems with memory.
