

## T.W. Lewis Melanoma Center of Excellence

The T.W. Lewis Melanoma Center of Excellence has been established at Banner MD Anderson Cancer Center creating a comprehensive melanoma program for diagnosis, treatment and research in the Southwest.

According to SEER data, Melanoma is the fifth most common cancer in the United States. With a pathological diagnosis of early to late stage melanoma, patients can be referred to the T.W. Lewis Melanoma Center of Excellence to be treated in our multidisciplinary setting using evidence based treatment plans. Our team of experts work together to tailor care plans to the individual needs of each patient. This team has all the services at one location needed to treat the whole person — not just the disease.
