

Banner Health Wellness

Open Lab Blood Tests

Call (970) 810-6633 to schedule an appointment. (PRICES AND DATES ARE SUBJECT TO CHANGE)

Banner Health Wellness offers low cost blood screenings to community members at:

North Colorado Medical Center

1801 16th St., Greeley, CO (East Entrance #6)
2nd & 4th Wednesday of each month: 7:00am to 8:45am

McKee Medical Center

2000 N. Boise Ave, Loveland, CO (Conference & Wellness Center)
1st Wednesday of each month: 7:00am to 8:45am

Johnstown Family Physicians

222 Johnstown Center Drive, Johnstown, CO
3rd Wednesday of each month: 7:30am to 8:45am

Berthoud Health Clinic: Family Medicine

401 10th Street, Berthoud, CO
3rd Wednesday of each month 7:30am to 8:45am

***We are unable to bill Medicare or insurance. Please share your results with your physician.**

General Health Screenings

Comprehensive Metabolic Panel (CMP) ...\$20

Includes screening of your electrolytes, glucose, kidney and liver function.

Health Screen (CMP and LIPIDP) ...\$40

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol) and heart function.

Health Screen Plus (CMP, LIPIDP, CBCD) ...\$55

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol) and heart function. The CBCD includes screening of your red and white blood cell count, platelets, hematocrit, overall screening for infection and anemia.

Health Screen Deluxe (CMP, LIPIDP, IRON, TSH) ...\$78

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol) and heart function, iron level, and thyroid function.

Health Screen Expanded (CMP, LIPIDP, TSH, CBCD) ...\$80

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol) and heart function, thyroid function, complete blood count screening of your red and white blood cell count, platelets, hematocrit, overall screening for infection and anemia.

Men's Health Screen (CMP, LIPIDP, CRP/HS, PSAS) ...\$90

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol) and heart function, High sensitivity C-reactive protein, and Prostate screening.

Women's Health Screen (CMP, LIPIDP, CRP/HS, TSH) ...\$90

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol) and heart function, High sensitivity C-reactive protein, and thyroid function.

Ultimate Health Screen (CMP, LIPIDP, GGT, URIC, IRON, PHOS, MG, and TSH) ...\$100

Includes screening of your electrolytes, glucose, kidney and liver function, lipid panel (cholesterol), and heart function, gout, iron, phosphorus and magnesium, and thyroid function (TSH).

Individual test offered as well

Calcium (CA) ...\$10, Electrolytes (Lytes) ...\$20, Magnesium (Mg) ...\$12, Phosphorus (PHOS) ...\$10,

Potassium (K) ...\$9, Sodium (NA) ...\$9

Cardiac Health Testing

Cardiac Screen (LIPIDP, CRP/HS, HOMOCYS) ...\$70

Includes a lipid panel (cholesterol), high sensitivity C-reactive protein test for assessing risk of heart attack and stroke, and a Homocysteine test which also looks for risk of heart attack, stroke and in addition dementia.

Lipid Panel (LIPIDP) (included in the Cardiac Screen Panel and variety of Health Screens) ...\$25

Measures total cholesterol, high density lipoprotein, low density lipoprotein and triglycerides, to assess risk of cardiovascular disease.

Cardiac CRP (CRP/HS) ...\$25

High sensitivity C-reactive protein testing can be helpful in assessing the risk of heart attack and stroke. This sensitive test measures the presence of inflammation in the body.

Homocysteine (HOMOCYS) ...\$30

Homocysteine testing can be helpful in assessing the risk of heart attack, stroke, and dementia. It can also be used to determine Vitamin B12 deficiency and may be elevated in diseases of the kidneys, thyroid, bowel, or alcoholism.

Over →

Blood Counts or Anemia Checks

Complete Blood Count (with differential) (CBCD) ...\$18

Includes your red and white blood cell count, platelets, hematocrit, overall screening for infection and anemia.

Blood Typing (ABO/RH) ...\$15

Ferritin (FERRI) ...\$25

Ferritin is a protein in the body that binds to iron. The amount of ferritin in the blood can show how much iron is stored in the body.

Folate, Serum (FOL)...\$20

Used to determine a folate deficiency, which could be due to anemia, malabsorption, or malnutrition.

Iron Level (IRON) ...\$10

Used to test how much iron is stored in your body. Iron is an important mineral that the body needs to produce red blood cells.

Vitamin B12 (B12) ...\$40

Used to determine a Vitamin B12 and/or Folate deficiency, which could be due to anemia, malabsorption, or malnutrition.

Kidney/ Liver Test

Bilirubin Total (BILIT) ...\$15

Bilirubin testing checks for levels of bilirubin in your blood. The test can be used to screen for different types of liver problems.

Hepatitis B Surface Antigen (HBS) (w/confirmation) ...\$50

Hepatitis B is a serious liver infection caused by the hepatitis B virus. The disease is spread through blood, semen, or other body fluids. This test is done to determine if someone is infected with the hepatitis B virus. Positive test results are reported to the State Health Department for statistical analysis and patient follow-up.

Hepatitis C (HCV) ...\$45

Hepatitis C is a disease that damages the liver caused by the Hepatitis C virus (HCV). This disease is spread through the contact of infected blood that enters the human body. It is recommended to get tested if you were born between 1945-1965, diagnosed with HIV, received a blood or organ transplant before 1992, have *ever* injected illegal drugs, were exposed to blood on the job, **or** received clotting factors made before 1987. Positive test results are reported to the State Health Department for statistical analysis and patient follow-up.

Gout, Arthritis, or Inflammation Screenings

Uric Acid (URIC) ...\$8

This test is used to determine if you have high levels of uric acid in your blood which can cause gout arthritis or kidney stones.

Diabetes Testing

Diabetes Screen (HGBA1C and GLUCF) ...\$32

Hemoglobin A1C (HGBA1C) (diabetes screening) ...\$27

This is used to monitor glucose control over time for those with diabetes. The goal is to keep blood glucose levels as close to normal as possible. This helps to minimize the complications caused by consistently elevated glucose levels, such as progressive damage to the kidneys, eyes, cardiovascular system and nerves.

Glucose Fasting (GLUCF)...\$10

Thyroid Screening Test

Thyroid Panel (TSH, T3F, FT4) ...\$70

Thyroid Stimulating Hormone (TSH) ...\$25

Controls thyroid gland function. If your thyroid gland is over or under producing hormone, your doctor may recommend that your TSH be screened regularly.

T3 Free (T3F)...\$25

The T3 test is usually ordered as a follow-up to an abnormal Thyroid Stimulating Hormone (TSH) test.

Free T4 (FT4)...\$25

Individuals who have hyperthyroidism will have an elevated FT4, whereas those with hypothyroidism will have a low level of T4. This test helps to distinguish between different causes of hyperthyroidism and hypothyroidism.

Endocrinology Screening Tests

Estradiol (E2) ...\$40

This test measures estrogen levels for the purpose of evaluating ovarian function, including abnormal menstrual cycles and menopause.

Follicle Stimulating Hormone (FSH) ...\$45

This test checks how much FSH (Follicle Stimulating Hormone) is in your blood. FSH regulates the functions for both the ovaries and testes. Lack or insufficiency of it can cause infertility or subfertility in both men and women.

Luteinizing Hormone (LH) ...\$45

This test checks how much LH (Luteinizing Hormone) is in your blood. The amount of LH in your blood can indicate underlying problems associated with a variety of reproductive issues.

Progesterone (PROG) ...\$30

Progesterone levels are useful for recognizing causes of infertility, to monitor high risk pregnancies, and to help determine causes of abnormal periods.

Prolactin (PROLACT) ...\$30

The Prolactin test can help to evaluate infertility, irregular periods, pituitary disorders, or as a follow-up to low testosterone levels in males.

Testosterone Total (TEST) ...\$40

Testosterone testing is used to diagnose several conditions in men, women, and boys. These include early or delayed puberty, infertility, decreased sex drive, testicular tumors, and pituitary disorders.

Other:

Prostate Specific Antigen (PSAS) ...\$30

Recommended for men 50 years of age and older, unless there is a positive family history. PSA is a protein that the male prostate gland produces. Elevated levels may be seen in men with prostate cancer or in prostate enlargement.

Vitamin D (Vitamin D 25) ...\$45

Vitamin D is vital for the growth and health of bone, as well as the regulation of the immune system, metabolic function, and cancer prevention.

Why Should I Know My Numbers?

Having regular blood work gives you and your doctor the ability to monitor what is going on inside your body. Knowing your numbers and keeping track of them on a regular basis will allow you to better understand how you can improve your lifestyle and overall health. If your blood work returns with concerning value/s, one of our Wellness professionals will contact you with recommended follow up. Should you have any *urgent* questions regarding your numbers, please contact your physician.
